

ABSTRACT OF THE DISCLOSURE

The invention relates to a capstock polymer composition comprising a blend of a melt extrudable acrylic polymer component; from 10% to 50% by weight of a halogen donor component; a halogen volatilisation component; and a char-inducing component which induces formation of a char upon application of flame to the composition.

A vertical strip of ten grayscale images, each showing a single digit from 0 to 9. The digits are rendered in a standard, slightly stylized font. Each digit is centered within its own rectangular frame. The background of each frame is a different grayscale texture, ranging from a fine, regular grid to a more chaotic, noisy pattern. The digits themselves are a uniform dark gray, providing a clear contrast against the various backgrounds.
